ACD's strength in the LNG industry continues to grow, as we expand our reach into nearly every aspect of LNG, from bunkering to main propulsion powering sea going vessels.

LNG as the fuel of choice for marine propulsion replacing diesel fuel. ACD was approached to help provide a new pumping solution for high pressure fuel injection, using LNG to power the ship's main engine, as well as a bunkering solution at the port. We drew on our vast experience designing equipment for new applications and creating custom solutions based on our proven technology. As a result, ACD's pumps were used in nearly every stage of the operation.

ACD is excited about several things happening at the Port of Jacksonville.
